25X1X

1. Between 10 a.m. and 2 p.m. on 20 September 1951, at least 10 twin-engine aircraft were parked in front of the hangars on the southwestern edge of Finsterwalde airfield. Take-offs were made by Pe-2s at 11:20, 11:42 a.m., at noon and 12:40 p.m. * There was a medium degree of cloudiness. No landings were observed. The aircraft which took off at 11:42 a.m. and 12:40 p.m. towed a three section object on a rope about 250 meters long. ** About 12:55 p.m., a Pe-2 approached the field from the east at an altitude of about 70 meters and released such a device over the field.

The watchtower near the fuel dump on the northern edge of the field was occupied. No other sentries were seen.

25X1X

2. Between 10 a.m. and 3 p.m. on 25 September, about 30 dark green twin-engine aircraft with double rudder assemblies were observed in the southern section of the field. All the hangars were closed. There were intermittent showers and a close cloud ceiling at an altitude of about 500 meters. No flights were made.

Comment.

the airfield is occupied by two bomber regiments. These regiments are equipped with PE-2s. In addition to the PE-2s, type-27 aircraft were also observed in Finsterwalde in April 1951. It cannot be determined from available information whether type-27 planes are still stationed there. The exact number of Pe-2s stationed at the field is not known because most of the aircraft are parked in closed hangars.
